

Workflow example with R2BEAT

Scenario 1

Only a sampling frame containing the units of the population of reference is available, no previous round of the sampling survey to be planned

In [1]:

```
# Install last version of R2BEAT
#devtools::install_github("barcaroli/R2BEAT", dependencies = FALSE)
library(R2BEAT)
```

```
## Sampling frame
load("pop.RData")
```

Precision constraints

In [6]:

```
cv <- as.data.frame(list(DOM=c("DOM1", "DOM2"),
                          CV1=c(0.02, 0.03),
                          CV2=c(0.03, 0.06),
                          CV3=c(0.03, 0.06),
```

```
CV4=c(0.03,0.06)))
```

CV

A data.frame: 2 × 5

DOM	CV1	CV2	CV3	CV4
<chr>	<dbl>	<dbl>	<dbl>	<dbl>
DOM1	0.02	0.03	0.03	0.03
DOM2	0.03	0.06	0.06	0.06

Sensitivity analysis

Deff

```
In [7]: deff_sens <- sensitivity(samp_frame=pop,
                                errors=cv,
                                id_PSU="municipality",
                                id_SSU="id_ind",
                                strata_var="stratum",
                                target_vars=c("income_hh","active","inactive","unemployed"),
                                deff_var="stratum",
                                domain_var="region",
                                minimum=50,
                                delta=1,
